

QAMAR SHAHZAD

Senior DevOps & Automation Engineer | AI Systems | Full-Stack Platform Developer

Dubai, Business Bay, UAE | +971 52 973 3130 | qam600@gmail.com | qaam.work | linkedin.com/in/iamqam

PROFESSIONAL SUMMARY

Results-driven DevOps, Automation, AI Systems, and Full-Stack Engineer with 10+ years of experience building, deploying, and maintaining scalable digital platforms, backend systems, cloud infrastructure, and workflow automation solutions. Experienced in Python, Django, Linux-based deployments, Docker, Git, cloud VM hosting, API integrations, system automation, and AI-powered operational tools. Hands-on expertise in designing and managing production systems, CI/CD pipelines, code quality workflows, and business-critical applications with a focus on availability, scalability, security, and operational efficiency. Additionally experienced in self-hosted infrastructure and private virtualization environments, including Proxmox-based systems, AI workflow orchestration, and modern automation tools such as n8n, LLM integrations, and AI-assisted operations. Independently built and delivered multiple full-stack platforms (Tourism, Sports B2B, Accounting, B2B Commerce) using Next.js, Django, PostgreSQL, Redis, and Celery.

CORE COMPETENCIES

DevOps & Infrastructure: Linux Server Administration, Docker, Proxmox Virtualization, Cloud VM Hosting, Application Deployment, Reverse Proxy / Web Server Configuration, SSL / DNS / Hosting Management, Server Troubleshooting

CI/CD & Code Quality: Jenkins Pipelines, SonarQube Code Quality Analysis, Nexus Repository Manager (Docker Image Caching), Git / GitHub, Automated Build & Deploy Workflows

Automation & AI Systems: Workflow Automation, n8n Pipelines, AI Chatbot Integrations, LLM Workflow Design, Claude / ChatGPT / OpenAI Integrations, API-based Automation, AI-assisted Business Process Automation

Full-Stack Platform Dev: Python, Django, Next.js, REST APIs, PostgreSQL, Redis, Celery (Task Queues), ntfy (Push Notifications), Flask, Custom CRM / Admin Systems, Booking Engines, Payment Gateway Integrations

AI-Assisted Development: Full-stack application development accelerated with Windsurf AI — independently delivered Tourism, Sports B2B, Accounting, and B2B Commerce platforms

Cloud, Monitoring & Ops: Google Cloud VM, DigitalOcean, System Reliability, Deployment Troubleshooting, Incident Resolution, Performance Optimization, Technical Documentation

PROFESSIONAL EXPERIENCE

Independent DevOps, Automation & AI Systems Engineer

Dubai, UAE | March 2025 – Present

- Designing and managing self-hosted and cloud-based infrastructure environments for automation, application hosting, AI workflows, and internal operations.
- Operating and maintaining a Proxmox-based virtualization environment for testing, deployment, and systems experimentation — including Jenkins CI/CD pipelines, SonarQube code quality analysis, and Nexus Docker image caching.
- Building automation workflows using n8n to reduce manual operational tasks and connect APIs, messaging tools, internal systems, and AI services.
- Working with Claude, ChatGPT, OpenAI, and related AI integrations to support conversational automation, productivity systems, and business process enhancement.
- Independently delivering full-stack platforms (Tourism, Sports B2B, Accounting, B2B Commerce) using Next.js frontend, Django backend, PostgreSQL, Redis, Celery, and ntfy for push notifications — accelerated with Windsurf AI.
- Managing application deployment environments, service configurations, hosting workflows, and infrastructure optimization for reliability and performance.
- Supporting custom backend solutions, API integrations, workflow logic, and AI-enhanced operations for internal and client-facing systems.

Arabian Nights Tours, Dubai

Technical Operations Engineer / Backend Developer | 2012 – March 2025

- Designed, developed, and maintained business-critical web applications, including travel systems, booking engines, internal dashboards, and operational management platforms.
- Built backend services and custom workflows using Python, Django, and REST APIs to support booking, reporting, operations, and customer-facing processes.
- Deployed and maintained production applications on Google Cloud VM and DigitalOcean, ensuring system stability, uptime, and scalability.
- Managed server-side deployments, environment configurations, application updates, and technical troubleshooting across multiple internal systems.

- Integrated AI chatbot functionality and automated workflows to improve response efficiency, customer interaction, and internal process automation.
- Supported payment gateway integrations, business logic implementation, and API connectivity with third-party services and platforms.
- Worked closely with operational and management teams to translate business needs into practical and scalable digital solutions.

AI Nasir Travel, Pakistan

Web & Online Operations Executive | 2008 – 2012

- Supported online business operations through website management, digital systems setup, and service promotion.
- Assisted in improving online visibility and technical structure of business websites and digital assets.
- Managed web-related updates, content publishing, and online customer acquisition support.

KEY PROJECTS

- **Travel Operations & Booking Platform:** Custom travel operations system with booking management, admin workflows, reporting, and operational tools. Stack: Django, PostgreSQL, Redis, Celery, Next.js.
- **Sports B2B Commerce Platform (Five Motion Sports):** End-to-end B2B platform for sports manufacturing brand (fmsportz.com) covering product catalogue, MOQ/lead time management, and OEM workflows. Stack: Django, Next.js, PostgreSQL, Redis, Celery, ntfy.
- **Accounting & Financial Management Platform:** Full-stack accounting system with transaction management, reporting dashboards, and business process automation. Stack: Django, PostgreSQL, Next.js.
- **Booking Engine with Payment Integration:** Built and maintained booking workflows with payment gateway integration, order handling, and customer process automation.
- **CI/CD & DevOps Lab (Proxmox):** Self-hosted DevOps environment with Jenkins CI/CD pipelines, SonarQube code quality analysis, Nexus Docker image registry, and Proxmox virtualization — all tested and operational.
- **AI-Powered Automation Workflows:** Implemented AI-assisted workflows using chat integrations, n8n automation logic, and API-based orchestration for internal and client-facing operations.
- **Internal Dashboard & CRM Workflows:** Created internal tools for operational visibility, service handling, and staff-facing business process management.

EDUCATION

- **Executive MBA – Hospitality & Tourism** | National Institute of Business Management | 2017 – 2018
- **Bachelor of Business Administration (BBA)** | Virtual University | 2009 – 2012

TOOLS & TECHNOLOGIES

Languages & Frameworks: Python, Django, Flask, JavaScript, Next.js, HTML, CSS

DevOps / Infrastructure: Linux, Docker, Proxmox, Git, GitHub, Google Cloud VM, DigitalOcean

CI/CD & Code Quality: Jenkins, SonarQube, Nexus Repository Manager (Docker Image Caching)

Backend Stack: PostgreSQL, Redis, Celery, ntfy (Push Notifications), REST APIs

Automation / AI: n8n, API Integrations, AI Chat Integrations, Claude, ChatGPT, OpenClaw, Windsurf AI

Platforms / Systems: WordPress, Custom CRM, Booking Engines, Payment Integrations, B2B Commerce Platforms
